SeisGram2K BETA release

2016.04.07

- Automatic and interactive, linear polarization analysis in Particle Motion viewer
- Improvements and bug fixes to Spectrogram display.
- Interactive editor for nd (named discontinuity) format velocity models in Phases theoretical travel time analysis tool.
- Improvements and bug fixes to Helicorder display.
- Numerous minor changes and bug fixes.
NOTE: Java and general security checks are continuously becoming more strict. Consequently web page Applets such as SeisGram2K Applet may be difficult or impossible to run, and some functionality will be blocked.
